SAP Note

3724724 - Data Subscriptions 4.0 for BW on HANA and BW/4HANA 2021 and 2023

Component: BDC-BW (Business Data Cloud > SAP BW (PCE)), Version: 21, Released On: 07.10.2026

Symptom

The current SAP BW or SAP BW/4HANA system does not support Data Subscriptions which can be used for the SAP BW Data Product Generator (DPG) for SAP Business Data Cloud.

It **replaces** the former TCI notes 3593519 (TCI 2.0) and 3678407 (TCI 3.0).

With this note the Query Template Generator is introduced (QTG). The query template generator offers the possibility to transfer a SAP BW query including info providers and info object to SAP Business Data Cloud. Currently not all features kown in SAP BW are provided and due to the archtecture some features won't be supported at all. In order to check if the queries are transferable execute the ABAP report "rsdwc_tg_check_queries" in advance. Additionally, please check note 3774419 about supported features. This note will be updated regularly.

Other Terms

BWonHANA, BW/4HANA, DPG

Reason and Prerequisites

System Requirements

Systems for which the TCI is available:

- SAP BW 7.50 system running on an SAP HANA database aka BW on HANA. The minimum support package is SP26.
- SAP BW/4HANA system release 2021. The minimum support package is SP04. (Please note the new SAP_BASIS requirements)
- SAP BW/4HANA system release 2023. The minimum support package is SP04.
- If you have already installed Data Subscriptions 2.0 and 2.1 or 3.0, Data Subscriptions 4.0 can still be installed on top.

In the future the SPs for subsequent corrections will have to be increased.

Unsupported Systems:

- SAP BW/4HANA 1.0 and SAP BW/4HANA 2.0 are not supported.
- Embedded SAP BW (releases > 7.50) is not supported. Refer to SAP Note 3584640 for important details.

Legal and Contractual Requirements

The use of the Data Product Generator is only allowed if there is a corresponding capacity service of SAP Business Warehouse, private cloud edition within SAP Business Data Cloud (SAP BW, private cloud edition for SAP NetWeaver or SAP BW/4HANA, private cloud edition). Refer to SAP Note 3590400 for important details and the **SAP Business Data Cloud Core Capacity Supplement**.

Transport-Based Correction Instructions (TCIs)

Using the Data Product Generator may require the implementation of Transport-Based Correction Instructions (TCIs).

Implications on System Conversions and Upgrades

For SAP BW NetWeaver, the TCIs can only be applied to systems with software component SAP_BW 750. All higher releases for SAP_BW are not supported. Embedded SAP BW is also not supported, regardless of the release.

Please nore, if the TCI for Data Product Generator is installed on a SAP BW NetWeaver 7.50 system, only the conversion paths from SAP BW NetWeaver 7.50 (with TCI) to SAP BW/4HANA 2021 (SP05 or higher) and SAP BW/4HANA 2023 (SP04 or higher) are supported, otherwise the Data Product Generator functionality and corresponding custom metadata models will be lost.

Planning the installation of the TCI 4.0 Data Product Generator

Please note that this correction will activate a new BW object type. Due to the central extension, many programs must be recompiled, which is extremely runtime-intensive. Because the recompilation starts whenever an affected program is touched, the system may experience severe performance degradation for a certain period of time. It is therefore recommended to implement the correction outside regular business hours (or to plan accordingly for the significantly increased system load).

After Installing the TCI 4.0 DPG, it is recommended to run SGEN (FAQ TA SEGN - more Information please see note 1989778)

Prerequisites for Installation of TCIs for Data Product Generator

- It is imperative, that you **make sure that your note assistant (transaction SNOTE) is up to date** before you begin any installation, because there are recent corrections which would otherwise corrupt the TCI installation. There is a button "Check Note Assistant" which guides you with that, alternatively, make sure that notes 1668882, 2869143 and 3093855 are installed in the latest version (these are collection notes which are regularly updated).
- Make sure that your administration user is equipped with the roles SAP_OCS_STD and SAP_OCS_TCI_IMPORT required to use the Support Package Manager (SPAM).
- Implement the latest released patch level for the Support Package Manager (SPAM). The minimum patch level for SPAM is 95.
- To implement a TCI, transaction SNOTE in the ABAP system must be enabled for the same. Refer to the resources below:
  - SAP Note 2187425 - Information about SAP Note Transport based Correction Instructions (TCI) including the attached PDF document
  Download and apply SAP Note 1668882 to ensure that corrections for transaction SNOTE are applied to your system.
  IMPORTANT: Ensure the latest version of the Note Assistant is installed
- Please Check note 3093855 - Note Assistant: Important SAP Notes for the Revamped Note Assistant for completeness
- **Note:** The TCI **must be installed via transaction SNOTE (SAP NOTE ASSISTANT). Do NOT use transaction SPAM for this step.**

Additional Prerequisites for Installation of TCI for Data Product Generator 4.0

- For BW4HANA 2021 and BW4HANA 2023 also implement as prerequiste **SAP Note 3600085**. It contains SAP Note Analyzer files for UI5-Corrections which are prerequisites for the TCI. Follow that note to implement the single required UI5 notes, otherwise you will get a memory overflow during the TCI installation.
- Update SPAM Version to min. Patch Level 95 (please check SAP Note: 2843922 - Error TK 566 when releasing a workbench request, which contains Transport based Correction Instructions (TCI))
- Please note the complete overview as follows:

	SAP BW 7.50	**BW/4HANA 2021**	**BW/4HANA 2023**
Status	**RELEASED**	**RELEASED**	**RELEASED**
min. SPAM	min. SPAM Version 750/0095	min. SPAM Version 756/0095	min. SPAM Version 758/0095
min. SP Level	SAP_BW 7.50 SP26 SAP_UI 754 SP11 SAP_GWFND 750 SP26 SAP_ABA 750 SP26 SAP_Basis 750 SP26 ST-PI 740 SP20	DW4CORE 300 SP04 SAP_UI 756 SP05 SAP_GWFND 756 SP05 UIBAS001 756 SP05 SAP_ABA 75G SP05 SAP_Basis 756 SP05 ST-PI 740 SP20	DW4CORE 400 SP04 SAP_UI 758 SP02 SAP_GWFND 758 SP02 UIBAS001 758 SP02 SAP_ABA 75I SP02 SAP_Basis 758 SP02 ST-PI 740 SP27
Prerequisites for UI5	None	For UI5 corrections see **Note 3600085**	For UI5 corrections see **Note 3600085**
Update SNOTE prior to installing the TCI	Update Transaction SNOTE via the "Check note assistant" button, specifically make sure that the following notes are installed: 1668882, 2869143 and 3093855 **Note:** The TCI **must be installed via transaction SNOTE (SAP NOTE ASSISTANT). Do NOT use transaction SPAM for this step.**		
Additonals Notes		**In SP04**: Install newest Version of note **3586682**	
The TCI can be installed in:	SAP_BW 7.50 SP26 – SP35	DW4CORE 300 SP04 – SP14	DW4CORE 400 SP04 – SP08
The TCI is completely included in:	SAP_BW 7.50 SP36 + SP37(add corrections)	DW4CORE 300 SP15	DW4CORE 400 SP09 + 10 (add corrections)

Supported Conversion / Upgrade / Update Paths for Systems with TCI:	BW/4HANA 2021 SP15 BW/4HANA 2023 SP10 SAP_BW 7.50 SP37 or higher Upgrade to 7.5x embedded BW not supported	BW/4HANA 2023 SP10 and higher	BW/4HANA 2023 SP10 and higher
TCI 4.0 DPG	**Note 3724724 (this note)**	**Note 3724724 (this note)**	**Note 3724724 (this note)**
SPAU Adjustments	Please perform all needed adjustments in transaction SPAU and SPDD before you start implementing the TCI. All upcoming SPAU/SPDD adjustments which come up during the TCI installation, have also to be done before continuing with the TCI installation. Otherwise Syntax errors will occur. Also during the TCI installation SPAU/SPDD adjustment may come up. Also those have to be performed immediately. When performing the SPAU adjustmets for release BW/4HANA 2021, please check for note 3519759. if this note is listed then please re-implement first SAP Note 3519759, afterwards re-implement all SAP Notes from top to down. In the case you're installing the TCI with activ 'Generation of Dynpros and Programs' it is possible, that this phase failed with RC08. Please go in transaction SPAM to tab "Extras" and press "Ignore Generation Error" -> Do all SPAU adjustments completely -> "Confirm Adjustments" Button in transaction SPAM and restart the TCI installation.		
Install Updates /Fixes	This SAP Note has a zip-file attached contains the text file "Z_SAP_BW_NOTE_ANALYZER.txt" for **additional corrections after the TCI**. It will be constantly updated if new improvements and bug fixes are available. So please make sure to check it the SAP Note on a regularly basis. Download the attached ZIP file and unpack it. Then, 1. Please enter transaction SE38 in your system and create a new report "Z_SAP_BW_NOTE_ANALYZER" and copy/paste the coding of the text-file “Z_SAP_BW_NOTE_ANALYZER.txt” into the new report and activate the report in transaction SE38. For a detailed documentation of the SAP BW Note Analyzer, please check https://help.sap.com/doc/b235b5bd94664d9986f721f049d72cbb/1.0/en-US/User_Guide_for_SAP_BW_Note_Analyzer.pdf 2. Then execute the report and upload the file SAP_BW_DPG_FOR_BDC_<date>.xml directly from the selection screen of program Z_SAP_BW_NOTE_ANALYZER. After uploading the xml-file in the selection screen you can execute the report. A list of all required notes will be presented. Install all yellow or red notes in the listed order by clicking on the corresponding hotspots in the list. 3. Download the newest version of the xml file in regular intervals and install the listed notes to keep your system up to date because new corrections will be added regularly. You can see from the date in the file name, whether you have already the actual version or not.		
SGEN	After Installing the TCI 4.0 DPG, it is recommended to run SGEN (FAQ TA SEGN - more Information please see note 1989778). Start SGEN as described: Goto transaction SGEN --> Flag "Regenerate existing load" and mark radio button "Regenerate only invalid loads (mode INVALID)" and execute.		
Post Processing	N/A	After implementing the TCI from note 3724724, the BW/4 Cockpit is not reflecting the latest changes. Execute Tasklist SAP_BW4_AFTER_TCI4DPG as described in Note **3764464**	
Rollback enabled:	NO	NO	NO

Solution

This SAP Note contains the installation package (transport-based correction instructions, TCIs) that are needed for the SAP BW Data Product Generator for SAP Business Data Cloud.

The TCI **must be installed via transaction SNOTE (SAP NOTE ASSISTANT). Do NOT use transaction SPAM for this step.**
